All in the Family: Warm weather is on the way and animal moms and dads are getting ready to welcome their offspring into the natural world. Animal parents have to think about the same things that people moms and dads do- keeping babies fed, providing a warm, safe home and teaching them how to survive in their environment is a full time job!**Summer Adventures** 8:30 AM – 3:30 PM Mon-Fri# of Summer Adventure Weeks:

(ages 6-10) Members: \$185 Non-members: \$210

Extreme Environments: Remarkable animals have adapted to live in the most extreme of environments – the dark, deep depths of oceans and caves, seemingly barren deserts and vast ice fields. We'll travel to these unfamiliar worlds and take a close look at the animals that live there, how they survive and the clever ways scientists study the world's most extreme environments.*Spoon Beaks and Fork Toes:* It's dinnertime! With many different kinds of food comes many different kinds of adaptations for eating. Using beaks, toes, teeth, paws, big mouths and little mouths, the different ways that animals chow down at mealtimes is as fascinating as the animals themselves. Elbows off the table, dude.*Say What?:* Did you know that "talking" is not only done with words? Communication can happen even we're not talking simply by the way we sit, stand or by the look in our eyes. Animals communicate in these ways and others, utilizing smells, colors and body language to "talk" in their own unique way. We just have to look and listen to hear what they're saying!
